

TASKING

1. PROJECT: 8807 (3rd session)
2. VIEWER: 003
3. BACKGROUND: Your second session correctly accessed a "curved at the corners, rounded over, tapering, segmented, smooth, overarching structure" which seemed "like a 'shell' protecting more important stuff inside it". We are once again interested in the purpose/use of this structure or of what it contains.
4. INSTRUCTIONS: If necessary, review your first two sessions' notes. Reaccess the tasked site and provide as many of the following EEI as possible:
 - a. Describe the site's purpose. If the purpose is not readily discernable, feel free to move to any time or place where its purpose may be perceived (you do not have to stay at the site).
 - b. Move to any time when people are relating to the site or its contents and describe their activities.
 - c. Move to any time(s) of activity directly related to the target "manmade" and describe any processes (either of a people- or machine-oriented nature) associated with the structure or its contents.
